

OVERPAR SOLUTIONS CASE STORY

ELLIE

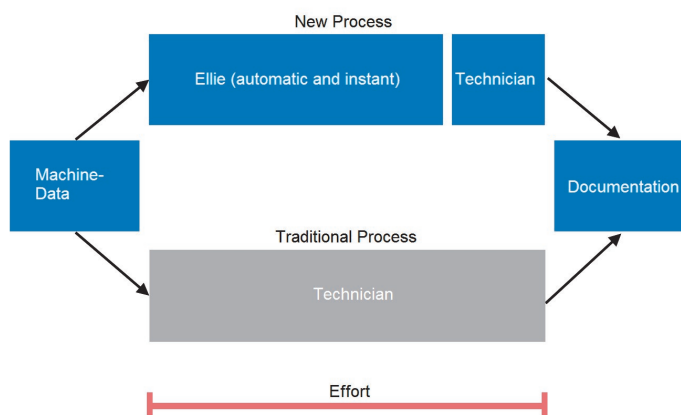

Automatic Analysis and Documentation of Machine Data

Want to process and evaluate industry machine data, analyse process capabilities, create production documents or go paperless? Ellie has you covered. Smart, lightning fast and designed to be easily integrated into virtually any set of diverse machines. Automate and digitalise your processes now to achieve higher documentation and production quality in less time.

CASE STORY

Assume, you have data from an injection moulding experiment. Until now, a technician had to manually evaluate the machine data and create all the necessary documents. This takes a long time and mistakes can happen. After that, the statistical analysis requires a lot of effort. Ellie does most of this work for you. All data will be validated and statistically processed to match your needs. Your company-specific documents and forms are created and populated with data automatically. What used to take hours is now done within a few seconds. Up-to-date KPIs such as material consumption, expenses, or downtimes are accessible to executives, across sites, at all times. The monthly reports and summaries are produced and distributed automatically.

Comparison of the effort of creating production documents and analyzing machine data

LET'S START

Together we lift your processes to the next level of the industrial evolution.

SUMMARY

CUSTOMERS

- Plastic processing companies
- Research and education institutes
- Industry 4.0 enthusiasts

SUCCESS FACTOR

- Inspire your customers by being an innovative step ahead of your competitors

OUR OFFER

- Custom-tailored for your machines
- Automatic data validation and processing
- Output documents optimized for you
- Dashboard for key figures
- Easy integration through full service

YOUR BENEFIT

- Perfect documentation immediately and without errors
- Statistical analysis for perfect process assessability and optimization
- Significantly reduced documentation effort for the technician
- Key figures for executives anywhere, at all times
- Data validation and output forms according to your specifications
- Seamless integration into your value chain
